Languages | Python, Ruby, JavaScript (ES6, AJAX, JSON), HTML, CSS, SQL

Operating Systems | Mac OS X, Linux

Frameworks/Libraries | Flask, React, jQuery, Bootstrap

Database/Tools | PostgreSQL, Git, GitHub, Command Line

PROJECTS

Daily | An emotion tracking calendar. A personal calendar that enables users to summarize their emotions from a day in three adjectives and a representative color. With trending graphics and easy at-a-glance understanding of how they are feeling over time. Built with React and a Flask server.

Tech Stack: PostgreSQL, SQLAlchemy, Python, Flask, React, Javascript, Ajax, Unittest

Github: <https://github.com/laurengordonfahn/daily>

Online: <https://dailytrackingcalendar.herokuapp.com>

Notebook | A one page dynamic notebook application. Built on a Flask RESTful API. Allows a user to create, edit, reorganize, and delete notes. Sign-In with Facebook.

Tech Stack: PostgreSQL, SQLAlchemy, Python, Flask, Javascript, jQuery, Ajax, OAuth2, Unittest

Github: <https://github.com/laurengordonfahn/notebook>

Online: <https://notebookonline.herokuapp.com>

Personal Website | A one page, responsive, static, React application. This personal website features my own resume information, but is built in compartmentalized code that can be quickly transformed to host any user's personal website! Built to feature the beauty of react and reusable code.

Tech Stack: Javascript, React

Github: <https://github.com/laurengordonfahn/personalWebsite>
